-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 22, 24 and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Ori (US Patent No. 6,670,980 B1).

Ori discloses an optical scanning apparatus (Fig. 1) comprising a deflection optical system (14), which deflects a light beam from a light source (11) and a scanning and imaging lens system (16, 17), which forms an imaging spot on a surface to be scanned with the light beam from the deflection optical system (18), wherein the wavelength of the light source is less than 500 nm or equal (column 3, lines 28-30) and wherein the scanning and imaging lens system has at least one plastic lens and an optical member having a spectral characteristic similar to the inverse of a wavelength characteristic of the

transmittance of the plastic lens (column 3, lines 30-57). The lens can be considered as a filter or optical thin film.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 23, 26, 27, 28 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ori in view of Takanashi et al (US Patent No. 4,977,417).

Ori discloses the claimed invention as set forth above except that the optical member comprises a reflecting mirror. Takanashi et al discloses the optical member that comprises a reflecting mirror (Fig. 2B, 54), a photosensitive member (15), a developing device (see Fig. 2A), a transfer device (24, 25), fixation device (23) and the reflecting mirror is a bending mirror whose reflectance becomes higher as a wavelength of the light beam from the light source becomes shorter (inherent). It would have been obvious to one of ordinary skill in the art to

make the optical member to be a reflecting mirror for the purpose of increasing the resolution of the final scanned image.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to EUNCHA P. CHERRY whose telephone number is 571-272-2310. The examiner can normally be reached on M-F 6:30-4:00, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, DREW DUNN can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
